What Has Changed?

- Microsoft has deprecated using a Microsoft-managed high-trust connection for SharePoint integration authentication. The alternative authentication method is now user-based SharePoint authentication, which is a mandatory prerequisite starting from Dynamics 365 FinOps 10.0.42. For more information on the subject, consult Microsoft documentation.
- Lasernet FO Connector 7.1.3 has introduced support for user-based SharePoint authentication.
- MSAL-based authentication is also supported in 7.1.3 and earlier versions as an alternative.

What Should You Do?

If you use Dynamics 365 FinOps 10.0.42 or later and rely on SharePoint:

- Use MSAL-based authentication

OR

- Upgrade to Lasernet FO Connector 7.1.3 or later to use the default connection/authentication between FinOps and SharePoint.
